

OraStripdx Works!

Why Wouldn't You Use It?

“**Finally, a solution** to a real daily exam room problem.”

– Jan Bellows, Board Certified Veterinary Dentist™

Proven in peer-reviewed clinical studies...

OraStripdx™
Thiol Test

Peer-reviewed studies show...

OraStripdx is better than the visual awake exam at early detection — and ongoing monitoring — of active periodontal disease — and is surprisingly cost-effective for increasing client compliance and generating additional dental revenue.

Quick and Effective

"The strip...may be useful as a quick, objective assessment of periodontal health, potentially enhancing compliance for thorough examinations, and promoting earlier and better-sustained treatment programs."

– Manfra et al., *Canadian Veterinary Journal*

Better Than Visual Awake Exams

"The thiol-detection test was superior to the visual awake examination at detecting the presence and severity of active periodontal disease and was an indicator of progression toward alveolar bone loss."

– Queck et al., *Journal of the American Animal Hospital Association*

Increases Revenue

"Routine use of a thiol-detection test in every wellness examination resulted in increased utilization of dental procedures, including professional dental cleanings."

– Goldstein et al., *Journal of Veterinary Science and Technology*
